Hello this is a comment regarding the "safe" glyphosate level for human/animal consumption. The only level that should be considered for any poison or pollutant is zero, period. To allow any in our exposure is not only irresponsible but inconsiderate of the people and of the future generation. Stop this madness before we are too late. Make it your responsibility and not another corporate profiting opportunity. Let's put the people before the corporations finally. Thank you and I have faith you will make the proper decision.
